Pyruvate is a pivotal metabolite in cellular respiration. a. If O₂ is not available to the cell, fermentation, an anaerobic process, occurs in the cytoplasm. b. During fermentation, glucose is incompletely metabolized to lactate or CO₂ and alcohol. Mon, 04 Jun 2018 17:18:00 GMT Cellular Respiration/Photosynthesis Test Study Guide - Cellular

Respiration. Animals metabolize food through a process known as cellular respiration. Cellular respiration is a catabolic process. That is, a food is broken down in order to release energy. How an organism utilizes food for energy is known as their metabolism. Enzymes are needed in order for animals to make the process energy efficient.
