the force of gravity pdf - , then
the force that m 2 exerts on m 1 is
 $F_{21} = F_{\text{grav}} = G \frac{m_1 m_2}{r^2}$
r. (5.2) Conversely, accordingly
to Newton's Third Law, the
force that m 1 exerts on m 2 is
 $F_{12} = F_{21}$
(5.3) Equations (5.2) and (5.3)
taken together show that
the gravitation is an attractive force,
i.e., the two masses are drawn to
one another. Mon, 14 May 2018

the Force of Gravity - EduPage -
force, we need to get hold of a 1
kg mass, have the force act on it
somehow, and then measure the
acceleration of the mass. The
magnitude of the acceleration
tells us the magnitude of the
force; the direction of motion of
the mass tells us the direction of
the force. Fortunately, there are
easier ways to measure forces.

Chapter 2 Review of Forces and
Moments - Brown University -
The force of gravity is the
weakest at the equator because of
the centrifugal force caused by
the Earth's rotation and because
points on the equator are furthest
from the center of the Earth. The
force of gravity varies with
latitude and increases from about
9.780 m/s² at the Equator to
about 9.832 m/s² at the poles.
